

We Stand Behind Our Plants!

OUR COMMITMENT TO YOU

Our mission is to provide excellence in quality, service, and selection. Our plants are grown with the greatest of care, so you can choose from our vast assortment with confidence. We back this up with a no hassle guarantee.

NO HASSLE GUARANTEE

We guarantee all our plants to be in good condition when leaving our store. To ensure success with any plant material, proper handling, planting and care is essential. All plants must be properly watered and hardy plants must be planted in the ground following our planting instructions for guarantee.

SEE OUR FULL PLANTING INSTRUCTIONS ON THE OTHER SIDE.

Hardy Evergreens, Broadleaf Evergreens, Trees, Shrubs, Vines, and Fruit Trees & Shrubs	1 Year
---	--------

Roses, Perennials & Clematis	Oct. 31st
------------------------------	-----------

Giftware & Clothing	7 Days, in original condition & with tags.
---------------------	---

Annuals, tropical houseplants herbs and patio furniture	Guaranteed to be in good condition upon leaving our garden centre.
--	---

If a plant dies within the guaranteed period we will issue an in-store credit for the original amount paid. Sale plants are guaranteed for the purchase price only. No cash refunds. We will not be responsible for insect and animal damage, acts of nature, chemical, or fertilizer misuse.

YOUR RECEIPT AND DEAD PLANT ARE REQUIRED FOR ALL RETURNS.

Join the CANADALE CLUB at www.canadale.ca to receive weekly e-newsletters, access to exclusive savings and offers, advanced notice of sales and special events, and enjoy other exclusive privileges. Membership is FREE.

PLANTING INSTRUCTIONS

Preparation

Your new plants should be planted as soon as possible. If there is some delay in planting, then it is important to guard against moisture loss. Store plants in a shady, wind protected area, and keep root area evenly moist. Water daily or as needed until planted.

Check List:

- Plants
- Liquid Transplanter 5-15-5 with root stimulators
- 3-in-1 Planting Soil Mix 30L
- Bark Mulch
- Tree Stake Kit for Larger Trees

Size of planting hole

It is vital to dig your planting hole at least 6-12" larger than the root ball on all sides to allow for soil enrichments before planting. When planting large heavy balls, the soil at the bottom of the hole should be left solid to prevent the tree from settling lower. The soil level of the plant should be the same as the ground, or up to 3" higher if planting larger trees in heavy clay soils. Do not plant deeper than the soil level in the pot. Amend the soil taken from the hole with 1 part 3-in-1 Planting Mix to 1 part soil. Mix thoroughly, taking care to break up large clumps. Use this enriched soil mix to fill in around the plants roots.

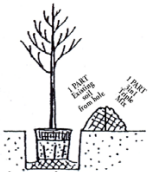

Plastic Pots

Water thoroughly before removing the container. If a light tapping on sides and bottom does not release the soil, make two cuts the length of the pot on opposite sides and gently pull away the halves. Use your fingers to gently loosen exposed roots that appear crowded. Place plant in hole and fill in around the roots with the enriched soil mix to about 3/4 full, leaving a depression to hold water. Water thoroughly and allow the water to drain away. Apply Liquid Transplanter to the root zone. Fill in the remaining soil and tamp firmly to secure plant. Ensure that the original soil that the plant was growing in is covered with at least an inch of new soil. Apply bark mulch to a depth of 2-4". Water again.

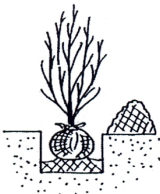

Fibre Pots

We can not over stress the importance of leaving the pot ON! These pots are made of paper and will rot away in the soil, and are easily penetrated by healthy plant roots. Break off the pot rim down to the soil level. Make three cuts halfway up from the bottom. DO NOT remove the bottom of the pot. Place plant in hole to the proper depth. Fill in around the roots with the enriched soil mix to about 3/4 full, leaving a depression to hold water. Water thoroughly and allow the water to drain away. Apply Liquid Transplanter to the root zone. Fill in the remaining soil and tamp firmly to secure plant. Ensure that the original soil that the plant was growing in is covered with at least an inch of new soil. Apply bark mulch to a depth of 2-4". Water again to settle everything in place.

Balled and Burlap Many trees, shrubs and evergreens have the root ball wrapped in burlap and secured with string or rope. Large sizes have the ball contained in a wire basket. These must be place in the hole just the way they are, burlap, rope and wire basket too. Fill around the ball with your enriched soil mix to 3/4 full and water thoroughly. THEN - untie all string or rope from the trunk or stems. Fold back burlap and ropes and tuck down out of sight. If there is a wire basket, fold back the loops and push down, leaving the wire basket on. Apply Liquid Transplanter to the root zone. Fill in the remaining soil and tamp firmly to secure plant. Ensure that the original soil that the plant was growing in is covered with at least an inch of new soil. Apply bark mulch to a depth of 2-4". Water again. Secure larger trees with Tree stake kit.

After Care As a rule, water newly planted trees and shrubs once or twice a week. Water deeply to soak the planting area completely. Deep watering ensures deep roots and healthy plants.
